

Ideation Phase – Empathy Map Canvas

Project: Book a Doctor App

Date: 18 June 2026

Primary User: Patient

Says: I want a doctor quickly, I need a trusted specialist, I don't want to wait in long queues.

Thinks: Is the doctor genuine? Is the slot available? Will my records stay private?

Does: Searches by specialty, compares profiles, uploads reports, books/reschedules appointments, checks notifications.

Feels: Anxious when sick, frustrated by delays, relieved when appointment confirmation is instant.

Doctor Perspective

Needs: A reliable way to manage appointment slots, view patient information, and avoid double-booking.

Pain Points: Manual scheduling, cancellations without updates, scattered patient records.

Admin Perspective

Needs: Doctor verification workflow, user support visibility, and a dashboard for approvals and issue tracking.
