

Project Design Phase – Proposed Solution

Project: Book a Doctor App

Date: 18 June 2026

Solution Summary

Book a Doctor is a full-stack healthcare booking system built with MongoDB, Express.js, React, and Node.js.

It provides three role-based portals: Patient, Doctor, and Admin.

The frontend offers doctor browsing, appointment scheduling, profile management, report uploads, and notifications.

The backend exposes REST APIs secured with JWT and bcrypt-based password hashing.

MongoDB stores users, doctors, appointments, and document metadata.

Expected Benefits

Reduced patient effort in finding and booking doctors.

Better schedule utilization and appointment visibility for doctors.

Centralized approval and operational control for administrators.
