

Project Design Phase – Data Flow Diagram & User Stories

Project: Book a Doctor App

Date: 18 June 2026

Level-0 DFD (Textual)

Patient provides search criteria/booking request → System fetches doctor data and slot availability → Appointment stored in database → Doctor/Admin receive updated schedule/records → Patient receives confirmation notification.

Sample User Stories

As a patient, I want to search doctors by specialization so that I can find the right healthcare provider quickly.

As a patient, I want to book and reschedule appointments so that I can manage visits conveniently.

As a doctor, I want to view upcoming appointments so that I can manage my day efficiently.

As a doctor, I want to update availability so patients can book only valid slots.

As an admin, I want to approve doctor accounts so only verified doctors appear on the platform.
